A natural world in miniature

COLLECTA®

Our Values
Safety, attention to detail, authenticity and excellence.

Our Vision
To create the natural world in miniature.

Our Mission
To inspire a love of nature and sense of wonder at its discovery of creatures, through our range of authentically detailed, hand painted miniature animal figurines.

To stimulate creativity, through sensory play and imagination, and to encourage curiosity about the natural world - play, learn, collect, develop.

To bring to life the prehistoric world and foster an understanding of the evolution and extinction of species. To highlight the importance of protecting our endangered species and their habitat.

To bring the highest standards of craftsmanship, materials and safety to our collectable range. The play models are solid, safe in water, and dishwasher proof, ensure they are hygienically safe.

Horse Country

Deborah McDermott

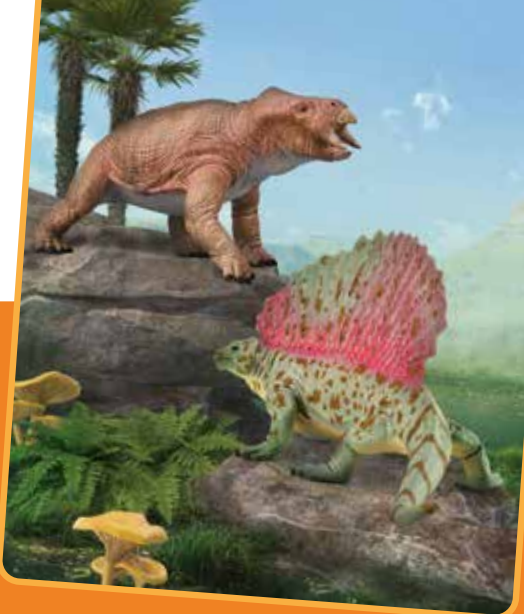

Deborah is a sculptor living in Southern California. As a sculptor, she observes the anatomy, movement and expressions of horses as well as their unique qualities that make each horse an individual.

Deborah McDermott

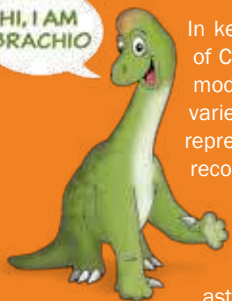

Prehistoric World

HI, I AM BRACHIO

In keeping with the traditions of CollectA the new for 2024 models reflect the huge variety of prehistoric animals represented by the fossil record. A total of seven new prehistoric figures are being introduced this year.

Working in collaboration with talented German sculptor Matthias Geiger, CollectA has brought to life a medley of creatures that reflect the astonishing diversity of animals that once roamed the land or flew in the skies of an ancient Earth.

The fearsome Middle Jurassic pterosaur *Dearc sgiathanach* is a welcome new addition to the CollectA Age of Dinosaurs Deluxe range. It is one of the largest flying reptiles known from the Jurassic. This figure in 1:3 scale and has a paint scheme inspired by the colours and symbols found on the flag of the Isle of Skye, the Scottish island upon which the single fossil specimen that represents this genus was discovered.

There is a new 1:100 scale sauropod. The giant *Dreadnoughtus* from the Late Cretaceous of Argentina. Named and described in 2014, it was one of the largest land animals to have ever existed. Around 45% of the skeleton of the type specimen was recovered, one of the most complete skeletons of a super-sized dinosaur discovered to date. These fossils have provided palaeontologists with new information on the anatomy of giant dinosaurs.

Joining the *Dreadnoughtus* in the Age of Dinosaurs Deluxe range is a 1:20 scale replica of the armoured dinosaur *Polacanthus*. First scientifically described in 1865, *Polacanthus* continues to be studied to this day. The layout and configuration of every piece of armour and every spine and spike on the figure is based on a detailed analysis of the actual fossil material.

A male *Diprotodon* model in 1:20 scale is also introduced this year. *Diprotodon* is the largest marsupial that ever lived. It was the first fossil mammal from Australia to be scientifically described. This huge herbivore weighed around three tonnes and it was part of an amazing Australian megafauna that thrived on the continent during the Pleistocene Epoch.

In CollectA's Popular series we offer a dinosaur from the other end of the planet. A replica of the polar tyrannosaur *Nanuqsaurus* is being introduced. This dinosaur roamed northern Alaska in the Late Cretaceous. When first described (2014), *Nanuqsaurus* was estimated to have measured

around 6 metres long. However, more recent fossil finds suggest that *Nanuqsaurus* was much larger and that it was the apex predator in the high latitudes of North America.

This year marks the centenary of the scientific description of *Velociraptor*. To commemorate the hundred years since this dinosaur was first named, CollectA have introduced a 1:6 scale figure that reflects the very latest research. The CollectA Deluxe *Velociraptor* depicts this iconic dinosaur as an extremely agile and active animal. The plumage has been updated and the *Velociraptor* figure sports a propatagium, a flap of soft tissue linking the wrists to the shoulders, a feature it shares with living birds that can fly.

Last but not least in this "magnificent seven" is a 1:20 scale replica of the Late Triassic dicynodont *Placerias*. It is included in CollectA's Other Prehistoric Animal range, and it is the second dicynodont figure to be added to the CollectA range after *Lisowicia* which was introduced in 2020. The *Placerias* model has been given a subtle coat of sparse bristles running along the top of its back down to the chubby tail. Research has suggested that these animals, which were distantly related to modern mammals may have had hair, and the new for 2024 *Placerias* model reflects this recent interpretation of dicynodont fossil material.

Wishing you all a happy and peaceful year.

Matthias Geiger

Matthias is a German sculptor with a great passion for Dinosaurs. In collaboration with Anthony Beeson and other consultants, he brings life to CollectA's vision of prehistoric animals.

All our models are individually hand crafted to the highest standards and made with only the finest and safest materials. As part of our ongoing product improvement program, we continually strive to improve and upgrade all our models in an effort to bring you the best possible collection. All our products are rigorously tested to ensure they meet the highest safety standards. We hope you enjoy our models as much as we have enjoyed creating them.

Building a natural world in miniature for collectors.

Anglerfish
 L 12.8 x H 6.4 cm
 L 5 x H 2.5 in

The female has a piece of modified dorsal fin ray that protrudes above her mouth like a fishing pole and can illuminate itself. The male angler fish is much smaller compared with the female and not equipped to eat. He lives as a parasite onto the female and solely for fertilizing her eggs.

In Celtic and northern European folklore, the unicorn is depicted as a white horse-like animal with a long horn.

In the middle ages, it was commonly described as an extremely wild woodland creature, a symbol of purity and grace

Celtic Family Symbol

The Celtic symbol made up of three conjoined spirals in rotational symmetry is called Triskelion and means "three legs". This Triple Spiral represents the family as mother-father-child, eternity as life-death-rebirth and past-present-future. It also represents the three Celtic worlds: the spiritual world, the present world and the celestial world.

The Tree of Life

It is a representation of harmony and balance in nature. The Tree of Life symbolized strength, a long life, wisdom, and rebirth. The Celts also believed that they actually came from trees, and considered them magical, living beings. Trees were said to guard the land and acted as a doorway into the spiritual world.

Celtic Knot

This pattern represents the interconnection of life and our place within the universe. Celtic knots are referred to as endless knots due to the fact that they do not have an end or a beginning. The endless knots represent the eternalness of nature.

Sailor's Knot

This design features two intertwined ropes and may have been created by sailors during their long voyages as a means of remembering their loved ones. The Sailor's knot is symbolic of friendship, affection, harmony and love.
